

Science K–10 (incorporating Science and Technology K–6)

Syllabus Outcomes and Content Mapping Grids

Stage 4

The templates for mapping syllabus outcomes and content have been provided to assist teachers in evaluating existing and planning new teaching–learning programs for the *Science K–10 (incorporating Science and Technology K–6) Syllabus (2012)*

Outcomes Mapping Grid – Stage 4

Outcome		A student:	Station at Which Outcomes Are Met						
			1	2	3	4	5	6	7
Values and attitudes	SC4-1VA	appreciates the importance of science in their lives and the role of scientific inquiry in increasing understanding of the world around them	x	x	x	x	x	x	x
	SC4-2VA	shows a willingness to engage in finding solutions to science-related personal, social and global issues, including shaping sustainable futures			x		x	x	
	SC4-3VA	demonstrates confidence in making reasoned, evidence-based decisions about the current and future use and influence of science and technology, including ethical considerations							x
Skills	SC4-4WS	identifies questions and problems that can be tested or researched and makes predictions based on scientific knowledge			x				
	SC4-5WS	collaboratively and individually produces a plan to investigate questions and problems	x	x	x	x	x	x	x
	SC4-6WS	follows a sequence of instructions to safely undertake a range of investigation types, collaboratively and individually	x	x	x	x	x	x	x
	SC4-7WS	processes and analyses data from a first-hand investigation and secondary sources to identify trends, patterns and relationships, and draw conclusions	x	x	x	x	x	x	x
	SC4-8WS	selects and uses appropriate strategies, understanding and skills to produce creative and plausible solutions to identified problems	x	x	x	x	x	x	x
	SC4-9WS	presents science ideas, findings and information to a given audience using appropriate scientific language, text types and representations	x	x	x	x	x	x	x
Knowledge and understanding	SC4-10PW	describes the action of unbalanced forces in everyday situations							
	SC4-11PW	discusses how scientific understanding and technological developments have contributed to finding solutions to problems involving energy transfers and transformations							
	SC4-12ES	describes the dynamic nature of models, theories and laws in developing scientific understanding of the Earth and solar system							
	SC4-13ES	explains how advances in scientific understanding of processes that occur within and on the Earth, influence the choices people make about resource use and management	x	x	x	x	x	x	x
	SC4-14LW	relates the structure and function of living things to their classification, survival and reproduction							
	SC4-15LW	explains how new biological evidence changes people's understanding of the world					x		
	SC4-16CW	describes the observed properties and behaviour of matter, using scientific models and theories about the motion and arrangement of particles	x			x	x		
	SC4-17CW	explains how scientific understanding of, and discoveries about, the properties of elements, compounds and mixtures relate to their uses in everyday life			x				

Content Mapping Grid – Stage 4

Working Scientifically		Station at Which Outcomes Are Met						
		1	2	3	4	5	6	7
A student identifies questions and problems that can be tested or researched and makes predictions based on scientific knowledge SC4-4WS								
Content	<i>WS4 Students question and predict by:</i>							
	a. identifying questions and problems that can be investigated scientifically (ACSIS124, ACSIS139)	x	x	x	x	x	x	x
	b. making predictions based on scientific knowledge and their own observations (ACSIS124, ACSIS139)	x	x	x	x	x	x	x
A student collaboratively and individually produces a plan to investigate questions and problems SC4-5WS								
Content	<i>WS5.1 Students identify data to be collected in an investigation by:</i>							
	a. identifying the purpose of an investigation	x	x	x	x	x	x	x
	b. proposing the type of information and data that needs to be collected in a range of investigation types, including first-hand and secondary sources 📊 ⚙️	x	x	x	x	x	x	x
	c. locating possible sources of data and information, including secondary sources, relevant to the investigation ⚙️ 🎓	x	x	x	x	x	x	x
	<i>WS5.2 Students plan first-hand investigations by:</i>							
	a. collaboratively and individually planning a range of investigation types, including fieldwork, experiments, surveys and research (ACSIS125, ACSIS140)	x	x	x	x	x	x	x
	b. outlining a logical procedure for undertaking a range of investigations to collect valid first-hand data, including fair tests	x	x	x	x	x	x	x
	c. identifying in fair tests, variables to be controlled (held constant), measured and changed	x	x	x	x	x	x	x
	d. describing safety and ethical guidelines to be addressed ⚠️ 👤 👤	x	x	x	x	x	x	x
	<i>WS5.3 Students choose equipment or resources for an investigation by:</i>							
	a. identifying suitable equipment or resources to perform the task, including safety equipment and digital technologies 📱	x	x	x	x	x	x	x
	b. selecting equipment to collect data with accuracy appropriate to the task (ACSIS126, ACSIS141) 📏	x	x	x	x	x	x	x
	A student follows a sequence of instructions to safely undertake a range of investigation types, collaboratively and individually SC4-6WS							
Content	<i>WS6 Students conduct investigations by:</i>							
	a. collaboratively and individually conducting a range of investigation types, including fieldwork and experiments, ensuring safety and ethical guidelines are followed (ACSIS125, ACSIS140) 👤 👤 ⚠️	x	x	x	x	x	x	x
	b. assembling and using appropriate equipment and resources to perform the investigation, including safety equipment	x	x	x	x	x	x	x
	c. selecting equipment to collect data with accuracy appropriate to the task (ACSIS126, ACSIS141) 📏	x	x	x	x	x	x	x
	d. following the planned procedure, including in fair tests, measuring and controlling variables (ACSIS126, ACSIS141) ⚠️ 👤 👤	x	x	x	x	x	x	x
	e. recording observations and measurements accurately, using appropriate units for physical quantities 🎓	x	x	x	x	x	x	x
	f. performing specific roles safely and responsibly when working collaboratively to complete a task within the timeline 👤 👤	x	x	x	x	x	x	x
	g. assessing the method used and identifying improvements to the method (ACSIS131, ACSIS146) ⚙️ ⭐	x	x	x	x	x	x	x

Content Mapping Grid – Stage 4

Working Scientifically (continued)		Station at Which Outcomes Are Met						
		1	2	3	4	5	6	7
A student processes and analyses data from a first-hand investigation and secondary sources to identify trends, patterns and relationships, and draw conclusions SC4-7WS								
Content	<i>WS7.1 Students process data and information by:</i>							
	a. summarising data from students' own investigations and secondary sources (ACSIS130, ACSIS145)  	x	x	x	x	x	x	x
	b. using a range of representations to organise data, including graphs, keys, models, diagrams, tables and spreadsheets 	x	x	x	x	x	x	x
	c. extracting information from diagrams, flowcharts, tables, databases, other texts, multimedia resources and graphs including histograms and column, sector and line graphs  	x	x	x	x	x	x	x
	d. accessing information from a range of sources, including using digital technologies  	x	x	x	x	x	x	x
	e. applying simple numerical procedures, eg calculating means when processing data and information, as appropriate 	x	x	x	x	x	x	x
	<i>WS7.2 Students analyse data and information by:</i>							
	a. checking the reliability of gathered data and information by comparing with observations or information from other sources 	x	x	x	x	x	x	x
	b. constructing and using a range of representations, including graphs, keys and models to represent and analyse patterns or relationships, including using digital technologies as appropriate (ACSIS129, ACSIS144)   	x	x	x	x	x	x	x
	c. identifying data which supports or discounts a question being investigated or a proposed solution to a problem 	x	x	x	x	x	x	x
	d. using scientific understanding to identify relationships and draw conclusions based on students' data or secondary sources (ACSIS130, ACSIS145)	x	x	x	x	x	x	x
	e. proposing inferences based on presented information and observations 	x	x	x	x	x	x	x
	f. reflecting on the method used to investigate a question or solve a problem, including evaluating the quality of the data collected (ACSIS131, ACSIS146) 	x	x	x	x	x	x	x
A student selects and uses appropriate strategies, understanding and skills to produce creative and plausible solutions to identified problems SC4-8WS								
Content	<i>WS8 Students solve problems by:</i>							
	a. using identified strategies to suggest possible solutions to a familiar problem 	x	x	x	x	x	x	x
	b. describing different strategies that could be employed to solve an identified problem with a scientific component 	x	x	x	x	x	x	x
	c. using scientific knowledge and findings from investigations to evaluate claims (ACSIS132, ACSIS234) 	x	x	x	x	x	x	x
	d. using cause and effect relationships to explain ideas and findings 	x	x	x	x	x	x	x
	e. evaluating the appropriateness of different strategies for solving an identified problem  	x	x	x	x	x	x	x

Content Mapping Grid – Stage 4

Working Scientifically (continued)		Station at Which Outcomes Are Met						
		1	2	3	4	5	6	7
A student presents science ideas, findings and information to a given audience using appropriate scientific language, text types and representations SC4-9WS								
Content	<i>WS9 Students communicate by:</i>							
	a. presenting ideas, findings and solutions to problems using scientific language and representations using digital technologies as appropriate (ACSIS133, ACSIS148) 🎓💻	x	x	x	x	x	x	x
	b. using appropriate text types in presentations, including a discussion, explanation, exposition, procedure and recount 🎓	x	x	x	x	x	x	x
	c. using a recognised method to acknowledge sources of data and information 🎓	x	x	x	x	x	x	x
	d. constructing and using a range of representations to honestly, clearly and/or succinctly present data and information including diagrams, keys, models, tables, drawings, images, flowcharts, spreadsheets and databases 🎓💻📊	x	x	x	x	x	x	x
	e. constructing and using the appropriate type of graph (histogram, column, sector or line graph) to express relationships clearly and succinctly, employing digital technologies as appropriate 📊💻	x	x	x	x	x	x	x

Content Mapping Grid – Stage 4

Earth and Space (continued)		Station at Which Outcomes Are Met						
		1	2	3	4	5	6	7
Content	<i>ES3 Scientific knowledge influences the choices people make in regard to the use and management of the Earth's resources.</i>							
	Students:							
	a. classify a range of the Earth's resources as renewable or non-renewable (ACSSU116) 🌱							
	b. outline features of some non-renewable resources, including metal ores and fossil fuels							
	c. describe uses of a variety of natural and made resources extracted from the biosphere, atmosphere, lithosphere and hydrosphere							
	d. investigate some strategies used by people to conserve and manage non-renewable resources, eg recycling and the alternative use of natural and made resources 🌱							
	e. discuss different viewpoints people may use to weight criteria in making decisions about the use of a major non-renewable resource found in Australia 🏠 🌱							
	f. outline the choices that need to be made when considering whether to use scientific and technological advances to obtain a resource from Earth's spheres 🏠 🌱 🌊							
	<i>ES4 Science understanding influences the development of practices in areas of human activity such as industry, agriculture and marine and terrestrial resource management. (ACSHE121, ACSHE136)</i>							
	Students:							
	a. identify that water is an important resource that cycles through the environment (ACSSU222)	x	x	x	x	x	x	x
	b. explain the water cycle in terms of the physical processes involved	x			x	x		
	c. demonstrate how scientific knowledge of the water cycle has influenced the development of household, industrial and agricultural water management practices 🏠 🌱			x		x	x	x
	d. research how Aboriginal and Torres Strait Islander peoples' knowledge is being used in decisions to care for country and place, eg terrestrial and aquatic resource management 🏠 🌱 🌊 🌐		x					

Content Mapping Grid – Stage 4

Living World (continued)		Station at Which Outcomes Are Met						
		1	2	3	4	5	6	7
Content	<i>LW4 Scientific knowledge changes as new evidence becomes available, and some scientific discoveries have significantly changed people's understanding of the world. (ACSHE119, ACSHE134)</i>							
	Students:							
	a. research an example of how changes in scientific knowledge have contributed to finding a solution to a human health issue  							
	b. recount how evidence from a scientific discovery has changed understanding and contributed to solving a real world problem, eg animal or plant disease, hygiene, food preservation, sewage treatment or biotechnology  							
	c. describe, using examples, how developments in technology have contributed to finding solutions to a contemporary issue, eg organ transplantation, artificial joints/limbs, treatment for diabetes, asthma, kidney or heart disease  							
	d. give examples to show that groups of people in society may use or weight criteria differently in making decisions about the application of a solution to a contemporary issue, eg organ transplantation, control and prevention of diseases and dietary deficiencies    							
	<i>LW5 Science and technology contribute to finding solutions to conserving and managing sustainable ecosystems.</i>							
	Students:							
	a. construct and interpret food chains and food webs, including examples from Australian ecosystems							
	b. describe interactions between organisms in food chains and food webs, including producers, consumers and decomposers (ACSSU112)							
	c. describe examples of beneficial and harmful effects that micro-organisms can have on living things and the environment							
	d. predict how human activities can affect interactions in food chains and food webs, including examples from Australian land or marine ecosystems (ACSSU112) 							
	e. explain, using examples, how scientific evidence and/or technological developments contribute to developing solutions to manage the impact of natural events on Australian ecosystems  						x	
	f. describe how scientific knowledge has influenced the development of practices in agriculture, eg animal husbandry or crop cultivation to improve yields and sustainability, or the effect of plant-cloning techniques in horticulture  							

Content Mapping Grid – Stage 4

Chemical World		Station at Which Outcomes Are Met						
		1	2	3	4	5	6	7
A student: <ul style="list-style-type: none"> describes the observed properties and behaviour of matter, using scientific models and theories about the motion and arrangement of particles SC4-16CW explains how scientific understanding of, and discoveries about, the properties of elements, compounds and mixtures relate to their uses in everyday life SC4-17CW 								
Content	CW1 <i>The properties of the different states of matter can be explained in terms of the motion and arrangement of particles. (ACSSU151)</i>							
	Students:							
	a. describe the behaviour of matter in terms of particles that are continuously moving and interacting	x			x			
	b. relate an increase or decrease in the amount of heat energy possessed by particles to changes in particle movement	x			x			
	c. use a simple particle model to predict the effect of adding or removing heat on different states of matter	x			x			
	d. relate changes in the physical properties of matter to heat energy and particle movement that occur during observations of evaporation, condensation, boiling, melting and freezing				x	x		
	e. explain density in terms of a simple particle model							
	f. identify the benefits and limitations of using models to explain the properties of solids, liquids and gases 							
	CW2 <i>Scientific knowledge and developments in technology have changed our understanding of the structure and properties of matter.</i>							
	Students:							
	a. describe the properties and uses of some common elements, including metals and non-metals							
	b. identify how our understanding of the structure and properties of elements has changed as a result of some technological devices							
	c. identify some examples of common compounds							
	d. explain why internationally recognised symbols are used for common elements							
	e. describe at a particle level the difference between elements, compounds and mixtures, including the type and arrangement of particles (ACSSU152)							
	f. investigate how people in different cultures in the past have applied their knowledge of the properties of elements and compounds to their use in everyday life, eg utensils, weapons and tools   		x
